Survey Summary:

A short survey was conducted to gather feedback on the **JoJu tsu custom programming language** and its usefulness as a learning tool. The survey focused on students' familiarity with programming languages (7 total respondents), their experience using JoJu tsu, and their perception of its syntax compared to C.

I. Readability

#	Questions	1 - easy	2	3 - somewhat easy	4	5 - not easy
1	How easy was it for you to understand the overall structure of programs written in our custom programming language?	4	1	1	1	0
2	How easy was it to understand the output or display statements used in the sample code?	5	1	1	0	0
3	How easy was it to interpret variable declarations and value assignments in the language?	5	1	1	0	0
4	How easy was it to follow the arithmetic operations used (e.g., addition, subtraction)?	4	1	2	0	0

II. Writability

#	Questions	1 - easy	2	3 - somewhat easy	4	5 - not easy
1	How easy was it for you to write the main program structure using our custom language?	4	1	2	0	0
2	How easy was it to write output/display commands in the language?	4	1	1	1	0

3	How easy was it to declare variables and assign values while writing code?	5	0	2	0	0
4	How easy was it to write arithmetic expressions correctly using the language's syntax?	3	2	2	0	0
